

Plug-in and play shipping

with Shopify

At just 23 years, Joeri de Wit has already built an impressive portfolio of webshops. Zonnebrillenkoning.nl is his first webshop that runs on the Shopify platform. He was looking for a solution which would make sending his letterbox packages easier. The PostNL Shopify plug-in does just that! Curious about Joeri's experiences with the plug-in?

'The PostNL plug-in saves me hours of time each day!'

Joeri de Wit, owner of Zonnebrillenkoning.nl

Easily create shipping labels?

Joeri explains, 'When the webshop first started, I bought a shipping label for every order. I packaged the order, typed the address for the label on the parcel, bought a shipping label and went to the PostNL point. There, each shipping label had to be scanned separately from my phone, which is of course error-prone. At a certain point, I had 25 to 50 letterbox packages every day! Sometimes that

took me hours. That had to change.'

Plug-in and play

Joeri was therefore searching for a connector with PostNL and found one in the Shopify app store. Joeri: 'The installation went very easily. I just followed the user guide.'

How does shipping go now?

'It is now quite simple. I pack up my orders and announce the shipment in Shopify with one click. Then my new label printer immediately prints the shipping label. I stick it on the letterbox package, and at the end of the day, I drop off everything at the PostNL point. That's it! This saves me an enormous amount of time each day. And my customers automatically receive track & trace emails. Super handy.'

Do you want to save time, avoid errors and send automatic track & trace emails to your customers just like Joeri? Then [Download](#) the PostNL plug-in in the Shopify app store!
